

Q. No.	QUESTION	CLO	Taskonomy Level	PLO	Marks
Q. 01	<p>An I-section, symmetric about both axis as shown in figure, has the following dimensions in mm units :</p> <p>Bottom flange = 300×100</p> <p>Top flange = 300×100</p> <p>Web = 300×50</p> <p>Determine mathematically the position of centre of gravity of the section.</p> 	1	C2	1	12
Q. 02	<p>Define any three of followings:</p> <ol style="list-style-type: none"> 1. Free vibration and vibration energy 2. Conditions of equilibrium 3. Centre of gravity 4. Main features of important types of pumps and hydraulic turbines 5. Transmission of power by belts, ropes and gears. 	1	C2	1	12
Q. 03	<p>A case of simply supported beam of uniformly distributed load of 5 kN/m is acting over span of 10 m. Calculate support reactions at both ends A & B as shown in figure. Also Draw shear force and Bending moment diagram neatly.</p> 	2	C3	1	12
Q. 04	<p>An overhead transmission line has to proposed and built at Sector A, Quaid-e-Awam University of Engineering, Science and & Technology, Nawabshah for a span of 220 m, the conductor weighing 804 kg/km. Calculate the maximum sag if the ultimate tensile strength of the conductor is $5,758 \text{ kg}$. Assume a safety factor of 2.</p>	2	C3	1	12
Q. 05	<p>The diameters of a pipe at the sections 1-1 and 2-2 are 200 mm and 300 mm respectively. If the velocity of water flowing through the pipe at section 1-1 is 4 m/s, find:</p> <ol style="list-style-type: none"> (i) Discharge through the pipe, and (ii) Velocity of water at section 2-2 	2	C3	1	12

	QUESTION	CLO	Taxonomy Level	P
a)	Find limits of the following by relating it to a derivative. i) $\lim_{h \rightarrow 0} \frac{1 - \sqrt{1+h}}{h}$ ii) $\lim_{x \rightarrow 0} \frac{(1+2x)^{10} - 1}{x}$ iii) $\lim_{x \rightarrow 0} \frac{\sqrt{\cos x} - 1}{x}$	1	C1	
b)	For the function $f(x) = \begin{cases} ax + b, & x > 0 \\ 1 - x + x^2, & x \leq 0, \end{cases}$ a and b constants, i) find all values of a and b for which the function will be continuous; ii) find all values of a and b for which the function will be differentiable.	1	C1	
c)	Where are the following functions discontinuous? i) $\sec x$ ii) $\frac{1+x^2}{1-x^2}$ iii) $\frac{d}{dx} x $	1	C1	
a)	Evaluate each of the following. i) $\frac{d}{dt} \left(\frac{3t}{\ln t} \right) \Big _{t=e}$ ii) $\lim_{u \rightarrow 0} \frac{3u}{\tan 2u}$ iii) $\int \frac{x-4}{(x+1)(x^2+4)} dx$ iv) $\int_0^1 \frac{dx}{(4+x^2)^{\frac{3}{2}}}$	1	C1	
b)	Prove that the following with the help of linear approximations at $x \approx 0$: i) $\sin x \approx x$ ii) $\cos x \approx 1$ iii) $e^x \approx 1 + x$ iv) $\ln(1+x) \approx x$ v) $(1+x)^r \approx 1 + rx$	1	C1	
c)	Derive the formula for quadratic approximation, also find the quadratic approximation of the following nonlinear functions at $x \approx 0$: i) $f(x) = \frac{e^{-2x}}{\sqrt{1+x}}$ ii) $f(x) = \ln(x+1)$ } ii) $f(x) = (1+2x)^{10}$	3	C3	
a)	Derive a reduction formula relating $\int_0^1 x^{2n} e^{-x^2} dx$ to $\int_0^1 x^{2n-2} e^{-x^2} dx$	2	C2	
b)	Find the volume of the solid obtained by rotating about the y -axis (that's the y -axis) the area under the graph of $y = e^x$ and over the interval $0 \leq x \leq 1$	2	C2	
a)	Let $x(t) = \cos^3 t$, $y(t) = \sin^3 t$, $0 \leq t \leq \pi/2$ be a parametric representation of a curve. Compute: i) the arclength of the curve. ii) the surface area formed by rotating the curve around the x -axis.	3	C2	
b)	A circular metal disc of radius a has a non-constant density δ (units: gms/cm^2); the density at a point P on the disc is given by $\delta = r^2$, where r is the distance of the point from the center of the disc. Set up and evaluate a definite integral giving the total mass of the disc.	3	C2	
a)	Determine whether the following functions are goes to Divergence or Convergence with respect to their given limits i) $\int_0^{\infty} \frac{dx}{\sqrt{x^2+1}}$ ii) $\int_0^{\infty} e^{-x^2} dx$ iii) $\int_2^{\infty} \frac{(x+10)dx}{x^2+1}$	3	C2	
b)	Explain Taylor's Series and Taylor's Formula. Also, Find the Taylor series for $\tan^{-1} x$ and e^x around $x \approx 0$ by using term-by-term differentiation or integration on the appropriate geometric series. Give enough terms to make the pattern clear.	3	C2

Q. No		CLO	Taxonomy Level	PLO	Marks
1(a)	What do you know about open short circuit and short circuit? What are their consequences in electric circuit?	1	C1	1	04
1(b)	What is the effect of temperature on resistance? Describe positive temperature coefficient, negative temperature coefficient and temperature coefficient (constant) of the resistance.	1	C1	1	04
1(c)	A 100 V lamp has a resistance of 230 Ω . Find the current taken by the lamp and its power rating in watts. Also, calculate the energy it will consume in 75 minutes.	3	C3	2	04
2(a)	Explain Kirchhoff's Current Law (KCL) and Kirchhoff's Voltage Law (KVL). What are the applications of KCL and KVL in an electric circuit?	1	C1	1	06
2(b)	Calculate the current flowing through the resistors in the circuit shown in the following figure. 	3	C3	2	06
3(a)	Explain charging and discharging of a capacitor with the support of relevant circuits, graphs and equations.	1	C1	1	06
3(b)	What is the charge on a 4 μ F capacitor charged by 12 V for a time $t=RC$, consider $R=1.4$ k Ω . Calculate the time constant τ ? Also, describe mathematically, when there will be maximum current and zero current while discharging the above capacitor? Present your results with the help of appropriate graphs.	3	C3	2	06
4(a)	Define the following: a. Electromagnet b. Magnetic flux c. Reluctance d. Magnetic field strength	1	C1	1	04
4(b)	What do you understand by the phenomenon of 'Force on a current carrying conductor when placed in a magnetic field'; what are the factors upon which the magnitude of the force depends? Also, explain the applications of the above mentioned phenomenon.	2	C2	1	04
4(c)	Explain Faraday's laws of electromagnetic induction. What are the applications of electromagnetic induction in the field of electrical engineering?	2	C2	1	04
05(a)	With the help of suitable waveforms explain the following: i. Cycle ii. Time Period (T) iii. Peak value iv. Instantaneous value v. Pulsating DC	1	C1	1	06
05(b)	i. The frequency of a typical AC system is 60 Hz. How much time will be required to complete ten cycles? ii. The supply voltage of a single phase AC system (pure sinusoidal) is measured as 215 V (r.m.s), what would be the peak value and peak-to-peak value?	3	C3	2	06
